**FEEDING DIRECTIONS**

Feed as much as the Guinea Pig will consume in a day. Young Guinea Pigs will begin eating pellets at a few days of age. The feeding of lettuce, cabbage, carrots, or turnips to provide additional vitamin C is not necessary since this product contains according to the National Research Council recommendations more than double the requirement of Vitamin C. This product should be fed within 5 months of the manufacturing date to ensure freshness, freedom from mold growth, and adequate dietary vitamin levels. Always provide guinea pigs with plenty of clean, fresh water. Follow a strict sanitation program to prevent disease. Please contact **Rowe Nutrition LLC** for more specific information.
