Vitamin A, Minimum.....	2,500 IU/lb

**INGREDIENTS**

Processed Grain By-Products, Forage Products, Roughage Products, Plant Protein Products, Flaxseed, Calcium Montmorellite, Cane Molasses, Calcium Carbonate, Salt, L-Lysine, Choline Chloride, Vitamin E Supplement, Bypass Methionine, Calcium Propionate, Copper Sulfate, Yucca Schidigera Extract, Ferrous Sulfate, Zinc Oxide, Manganous Oxide, Sodium Selenite, Niacin Supplement, d-Calcium Pantothenate, Vitamin A Acetate in Gelatin, Vitamin D Supplement, Mineral Oil, Vitamin B12 Supplement, Riboflavin Supplement, Menadione Sodium Bisulfite Complex, Ethylenediamine Dihydrochloride, Lactobacillus acidophilus fermentation product dehydrated, Lactobacillus casei fermentation product dehydrated, Bifido bacterium thermophilum fermentation product dehydrated, Enterococcus faecium fermentation product dehydrated, Rice Hulls, Calcium Propionate, Zinc Amino Acid Complex, Manganese Amino Acid Complex, Copper Amino Acid Complex, and Cobalt Glucoheptonate.

**FEEDING DIRECTIONS**

This pellet should be fed free choice to maintain animals. This product is a complete feed for all classes of rabbits. Feed requirements will vary depending on body weight, environment, housing and stage of production. Non-lactating adult rabbits should be hand fed approximately 1/2 ounce per pound of body weight, increased or decreased depending on condition desired. Nursing does and litters should be fed free choice. Nursing does and their litters will consume 1 to 3 ounces per pound of bodyweight per day. Gradually increase the amount fed from kindling so at the time the litter is one week old the doe is consuming all of the feed she will eat. Fryers will consume an average of 4 ounces per day during the period from weaning to market. Free choice clean fresh water should be available for animals at all times.

We have used collective terminology on our tags for formulation integrity. Please contact Rowe Nutrition LLC for more specific ingredient information.

Net Weight 50 Pounds (22.72 kg) or Bulk

**ROWE RABBIT FORMULATIONS** can be used not only for show rabbits but commercial and pet rabbits as well. Choosing the correct product depends on the breeder's purpose in raising rabbits and goals he or she wishes to obtain.

Following is a list of nutritional benefits contained in **ROWE RABBIT FORMULATIONS**

- **CONTAINS LASALOCID (BOVATEC) FOR THE PREVENTION OF COCCIDIOSIS CAUSED BY EIMERIA STIEDAE.**
- High levels of **ALFALFA MEAL**. Ask for a free sample, see and smell the difference compared to other major brands
- Complete feed, no additional feedstuffs are required
- Fixed formula. All Rowe formulations maintain the same ingredients in the same percentages continuously
- When fed properly **ROWE RABBIT FORMULATIONS** exceed all essential nutrient requirements required in a Rabbit's diet
- No additional sources of protein, energy, vitamins or minerals required including salt
- Amino Acids added to improve levels and ratios of essential amino acids dedicated to improved milk production, feed conversion, muscle development, rate of gain and fur enhancement
- Yucca Schidigera Extract added for reduction of ammonia levels
- High quality fiber ingredients in addition to Alfalfa meal along with other proven nutrients to maintain gut health, stimulate gut motility and reduce fur chewing. Low fiber high starch diets result in gut hypomotility, reduced cecotrope formation and prolonged retention time in the hindgut which often results in enteritis. Enteritis is a primary gastrointestinal disorder and often results in diarrhea. This disorder is a result of an imbalance in normal microflora in the gut; this disorder is often caused by insufficient fiber and or too much starch in the diet. **ROWE RABBIT FORMULATIONS** contains no corn, high levels of fiber and additional nutrients to reduce the incidence of enteritis, improve the immune system and general rabbit health.
- Probiotics for increased digestion, balanced PH levels and general health benefits
- Chelated Trace minerals for higher digestibility
- Higher than normal levels of B-Complexes for health and production benefits
- Omega 3's (Flaxseed) added to improve ratio of Omega 3 to Omega 6 for additional health benefits
- Additional L-Lysine added to meet the Lysine protein equivalent of an 18% protein without the additional complications sometimes associated with an 18% protein product.
